www.canadasbulls.com

Welcome...

...to our Annual Sale...

Our family continues to operate M.C. Quantock Livestock as a family ranch. We have worked darn hard to earn the trust, confidence, loyalty and respect of the people we deal with... today 76% of our bulls sell to repeat customers - many of them, second generation. Our bull program sets the standard for the industry and while imitation is the greatest form of flattery, remember, we are the originators. We stand behind every bull we sell. We give you the service you deserve and we appreciate your business.

We've built a good big cowherd over time producing bulls strictly for commercial cowmen. Unlike a lot of bull producers, we've paid for our ranch and cows with our cows. Traditional purebred guys sell dreams... we sell reality. In 30+ years, since MC Quantock was established, our cowherd has produced in excess of 35 million dollars worth of bulls... no "smoke and mirrors," no "trendy numbers," no unproven sires, no purebred fluff, just the real deal. We produce durable, high quality bulls that sire those "fancy" high quality calves the order buyers love, and we produce lots of them, but best of all, they are affordable. We've sold nearly 14,250 bulls, staged 54 bull sales and our family has been in the bull business for over 100 years. Buying the right bulls is an important part of your success. Our sale is an experience. A bull sells every 50 seconds for nearly 6 hours... hundreds of good, solid uniform bulls in 8 bull lines, quality bulls at everyday prices. If it's on your "bucket list" this is the year to come. "Free DVD, Free Bull Book, Free Delivery, Great Bulls" Call Today!

Mac & Pat

"This is your personal 'Bull Book' our complete bull video is on our website or call 1-800-561-2855 (BULL) and we'll mail you one! Enjoy it and show it to your neighbors."

Cody

Hannah & Grayson*

Lee

Why our sight Unseen is so successful and easy to use!

Sight Unseen Purchase Plan...

Here's How It Works...

It's simple and convenient!

Mac Creech, DVM

The most successful in the industry
and here's why...
SATISFIED CUSTOMERS!

"I'm not a big cow operation, have bought all my bulls Sight Unseen and were put on Bull Development and grow like weeds. Only 1 problem... I drive my wife crazy replaying the sale DVD!" - K. Kosheluk, SK

"There were five bulls that came off the trailer. I picked the one I liked best in my head. Not knowing which one was mine. Once they sorted them the one I picked ended up in my trailer. Thanks a lot. You guys got me the bull I would have picked myself and you did it sight unseen." - C. Tonneson, AB

"Mac & the video reassured me that I was making a good decision buying sight unseen. When I finally received my bull I never knew that kind of quality was around for a reasonable cost. Perhaps the best bull I've bought. Look forward to doing business again." - K. Victoor, AB

"We bought two Hereford bulls sight unseen. The whole process of getting such good quality bulls was absolutely painless, right from the first conversation to delivery. The bulls were everything we expected and more. Easy fleshing they maintained their weight through breeding." - G.&S. Clark, AB

"The Sight Unseen Purchase Program you offer, coupled with a rock solid reputation, unquestioned convenience and a large battery of quality, affordable sale bulls has again made bull buying from your ranch a pleasure." - J. Comrie, MB

"Being able to buy a bull over the phone is great peace of mind, and Mac was very easy to talk to and is very knowledgeable about his bulls. The bulls I got were perfect. It was as if I was at the sale. I am 100% satisfied and will buy again from M.C. Quantock." - M. Arnold, SK

While we will stage a normal live auction, we certainly encourage our customers to come view the bulls anytime before the sale, remember sight unseen is a foolproof option.

- I will personally visit with each and every customer, discuss your requirements and talk through bull choices.
- I know these bulls. My men and I have calved them, watched them grow, fed them and handled them. You deal with us not a third party.

• We guarantee your complete satisfaction. While we seldom deliver an unsatisfactory bull, it is entirely your choice to accept him on arrival...SIMPLY PUT - YOU MUST LIKE HIM WHEN DELIVERED OR WE TAKE HIM HOME, NO PROBLEM.

- When you have viewed the bull book, the video and the photos, you and I will make a short list of your choices and discuss your budget.

• We sell our bulls best bulls to lesser bulls within each breed. We will always try to buy the best bull available within your budget.

• We will absolutely never bid on or buy a bull that you and I have not carefully pre-selected as being suitable.

• We will absolutely never exceed your budget. In fact, most times we deliver under budget.

• Most important... **WE DON'T WANT YOU TO PAY FOR THE BULL UNTIL YOU HAVE SEEN HIM YOURSELF** in the flesh at your ranch. Then and only then do you make settlement.

- You can call anytime at your convenience to talk bulls.

1-800-561-BULL (2855)

Thanks, *Mac*

Welcome To

M.C. Quantock Bull Sale "Canada's Bulls" 🇨🇦

From the desk
of Mac...

"They call Us Old School"

...and we are proud of it

Last year our sale theme was "Storms never Last" and while that is true and the wide spread drought did lift in most of western Canada, it still hangs on in areas and in most of U.S. cow country.

With all the chaos of 2022 it still feels like we are living in a storm, but it too shall pass with time.

Agriculture is a "bright spot," people have to eat. Food doesn't come from the supermarket, it comes from hard working farmers and ranchers with grease and shit on their pants, working twice as many hours as most folks.

People in general once they get farther from their farm roots, (and most now are three generations) tend to lose their common sense and good judgment.

Ranchers and farmers are solid, salt of the earth folks, under appreciated in general, old school in their thinking and harder working than most. The silver lining is that they enjoy the opportunity to live, work and raise their kids in the "Old School" ways and values that have been the foundation of our country.

We have been at this for 50+ years. The cattle don't make many mistakes...they "walk what we talk." Our simplistic everyday, practical management and the integrity of our program have simply made us better with age. Wisdom gained from years of experience. Hard working ranch bulls. No purebred "fluff" and cows that paid for the ranch. Old School and proud of it.

We are Canada's bull supplier and these are "Canada's Bulls"

Our simplistic program "flies in the face" of a purebred industry that increasingly wants to breed cattle just for numbers on paper and how "pretty" they look in the show ring.

I believe there is an art to breeding cattle, as well as the science. It takes the instinct and talent of "cattle people" to make the good ones. I just believe if you **keep it simple, cull the open ones, the problem ones and the ugly ones, you'll be making quite a lot of progress.** after all, the auction mart does not ask you to send in a list of EPDs. They buy your calves because "they're big, stout, hairy calves" that look the part and because of your good reputation.

A well-designed cow operation is very profitable at today's price levels. Survive and prosper by remembering that a cow is a "low tech machine." She hates diesel fuel, technology and expensive feed; she harvests grass, stores solar energy and turns it all into high quality protein.

Let's ask our "climate change wizards" if they can turn grass and forage into high quality protein, of course they can't! ONLY the magic of a cow can do that and 70% of the world can only grow what a cow can eat.

Some misguided folks think "LAB GROWN MEAT" is the future. It's made in factories, depends on supply chains, assembly lines and energy. We all know how well that worked out during COVID. It uses all kinds of additives and resources to try to make it taste like the real thing. If your "heads on straight" maybe we should just eat the real thing. If it's made of stuff you can't pronounce and your grandmother wouldn't recognize as food, maybe you best not be feeding it to your family. I think I would sooner just trust a cow!

It's December 18, 2022 as I sit down to write this and reflect on the year, and it's been pretty darn good. We had a snowy winter in 21-22. The growing season got off to a good start. We grew good grass and in general the crops were good in our country. Feed and straw is expensive but at least it's available. We had a very dry late summer and fall but our corn crops were good, silage yields up a bit and our grazing corn is giving us lots of "cow days per acre"

Last year saw a major repositioning and consolidating of our summer grazing. We were fortunate to be able to lease Paul Naude's Loon River Ranch...about 36 quarters of pretty rough country with lots of potential. It took some different management but our competent crew got it figured out, learned the country and we got along well. Cody even had a little cow camp on the Loon River where he liked to hide out and check cows. It worked well.

Normally we like to stretch our fall grazing and wean pasture by pasture leaving the cows behind, but this year it all came to a "screeching halt" in November when we got winter and cold winter over night.

We gathered nearly all our cows out of the snow. It was a long 3 weeks. At times like this I really appreciate our first rate, experienced crew. They just "cowboy up" and get it done.

We bred nearly 1400 females last summer. I tell people we are "road ranchers," nearly every cow gets on a truck going somewhere to summer grass. "Show our old cows a chute and they'll load themselves...the know they're goin' to a better spot. "Our pastures are spread out over 150 miles end to end, with us in the middle.

Our cow herd is big; every sort, every job, a big one, but it has its rewards. You can make real selection progress with "whole herd" selection and culling and our bulls show it. The uniformity unequalled: the quality, impressive. We don't just have a few "pretty show cows," we've got pastures full of "beautiful" ones. Beautiful because they're functional, they work for a living and they are paying for the ranch.

This cattle business is really pretty solid. Calves are \$200-\$300 more than a year ago. Cull cows are \$150 more and feed costs are reduced a little. Cow numbers across North American cow country are very low and beef demand is up. We are setting up for some very rewarding times.

The clear thinking cowmen and women who stay the course will enjoy some very profitable years.

On the personal side, Pat and I, our family and crew have remained healthy through it all. We are thankful everyday for the business we are in, for where we live and for the people we have around us.

Our son Cody ranches with us full time and has responsibility for the Charolais program. Credit to him how well he knows this herd and the progress he has made in half a dozen years. The cattle get better and better and have the "MC Quantock" stamp. When there is a cow we can't identify or a tough question about the "whites" just ask Cody, seldom is he wrong.

Our daughter, Robin and son-in-law, Mark and two busy grandkids, Hannah and Grayson, live in Calgary! Mark is the Director, Energy and Industrial Property Tax for Altus Group. Robin handles all our cattle records, registrations, etc. She also handles our internet work and is helping more with the advertising and office side of our ranch management. I cannot tell you how much I appreciate her as she takes a load off both Pat and I. Both Robin and Mark "work their butts off" sale week, we simply could not do it without them. Calm, competent and capable we can't thank them enough.

Our son Lee studied Ranch Management at Texas A&M and is not involved in the ranch at this time. He lives and works in Colorado. He was instrumental in setting up our website and social media in the past.

I don't want folks to think that Pat and I spend our time sitting around listening to classic country music but our description of our journey from last years bull book bears repeating. Pat and I joke that our journey in building our ranch can be summed up in three country songs. When we started on our own in the 90's we felt like it was Tanya Tuckers, "Two Sparrows in a Hurricane." As we raised our family and built our ranch, Garth Brooks, "We Might Have Done It Different, But We'd Have Had to Miss The Dance" seemed appropriate. And now Toby Keith's, "Don't Let The Old Man In" and the lyrics "how old would you be if you didn't know the day you were born" has particular meaning for me as does another of Toby's songs "I ain't as good as I once was...but I'm as good once as I ever was! We are still a pretty good team. I'm the "big picture guy" and she's the "detail lady." I cannot thank her enough for her contribution, support and for weathering the storm with me!

As I spend a little more time thinking I really believe "we won the lottery" to do what we do and live where we live. I like to say the word "thanks" quite a lot...gratitude is good for the soul.

We have always been blessed to have a great long term ranch staff. The opportunity, as I get older, to work with competent, young, enthusiastic, interested people is exciting and rewarding. They are all dedicated and have the best interest of the ranch at heart. We are so lucky to have them. Our foreman, Rick Knorr, takes on increasing responsibility as the ranch grows. He and his wife, Dom, now have a beautiful daughter, Sadie, to keep them busy. Ross Maxwell started with us in 2009, 13 years ago, he just handles everything. He and wife Lacey have two sweet daughters, Eveline and Elizabeth and have a small herd of their own on their place at Tuliby Lake. We were joined last year by Matt Mackeracher, Matt and wife Lauren and two little ones Callie and Tucker ranch north of Marwayne. Matt has made a real contribution here. He is capable beyond his years and a real "cow guy" Matt carries a big load managing and feeding a lot of cattle of his own as well. Jon Kennedy joined us fall "21" he is a "farmboy" from Rosalind, who spent a long spell in the oil patch and is enjoying getting back to his roots. Jon is capable cow wise and is a great mechanic. It seems there is not much he can't handle, organize and accomplish. Jon, his wife Nadine and two daughters, Trinity and Eva live right in the ranch yard, he likes the short commute. Our thanks also to Jake Pilkey who has helped us during our busy fall. I want to acknowledge the contribution Jason Whiting makes to our sale effort. Jason has built and edited our video and handles all the "techy" stuff sale week. He is a pleasure to work with and is pretty tolerant of an old cowboy.

A special thanks to Deb Lundquist who helps in the office and is Pat's "right arm" at sale time.

Our thanks to our friends who have given their help, advice and assistance all year and to all the fine people who help Pat and I during the sale week: our thanks in advance. We really do appreciate everything you do to help Pat and I during the sale week; our thanks in advance. We really do appreciate everything you do to help us and nothing would be possible without you. Our sale is on "experience" and we'd love to have you come. We'll be ready with lots of fellowship, good food and lots of great cattle. See you on Saturday, January 28, 2023

Sale Crew

General Information

Location:

The sale will be held the **Dick Jones Sales Pavillion Exhibition Grounds, 5521 - 49th Avenue, Lloydminster, Saskatchewan**. This is one of the finest sales facilities in Western Canada. All cattle are under cover in heated facilities.

Time:

The sale will commence at 12 noon, Saturday, January 28, 2023. Lunch will be served at 11:00 a.m.

Health:

Purchases may be taken right out from the sale to any point of Canada. Cattle may travel anywhere in Canada without test. All sale bulls have been semen tested. All sale cattle have been treated with Ivomec. Consult with M.C. Quantock for complete vaccination protocol. See page 23 for details.

US Health:

All bulls are guaranteed exportable. We will do all necessary tests and deliver the bulls to the nearest port of entry to Western Canada. A fee of \$250/bull will be added to the purchase price to cover these export costs.

Guarantee:

The cattle will be sold under the terms of the Standard Breeding Guarantee of the Canadian Hereford, Angus and Charolais Associations. **Breeders Guarantee, Bulls...** Should any bull fourteen (14) months of age or over fail to prove a breeder after being used on females known to be breeders, the matter shall be reported in writing to the seller within six (6) months following the date of purchase or six (6) months after the bull has reached fourteen (14) months of age. The seller will have the right and privilege of six (6) months to prove the bull a breeder. Pedigrees will be provided as soon as possible. All animals are guaranteed breeders. Refer to terms inside back cover.

Delivery:

All purchases are at the buyer's risk as soon as sold; however, every reasonable care and attention will be given while shipping is arranged. M.C. Quantock will provide delivery to central ranch locations anywhere in the Western Provinces absolutely free. Generally we have cattle going into all provinces such that we can arrange our load so that delivery will be convenient. On cattle going longer distances - M.C. Quantock will cost share deliver. M.C. Quantock guarantees that delivery will be no inconvenience or financial burden to any customer. Take advantage of our "Haul Yer Own" discount of \$75/bull picked up on sale day!

Soliciting:

It is unethical for anyone to promote, advertise or arrange the sale of any cattle, other than those in the sale, on the sale premises.

Phone or Mail Bids:

Any of our Sale Representatives can be relied on to act on your behalf. Phone numbers are as listed. **Better still, call us at 1-800-561-2855 to arrange Sight Unseen Purchases.**

Insurance:

Agents will be on hand to insure purchases the day of the sale. They are very knowledgeable and can handle any type of coverage. **We recommend coverage of bulls for loss of use as bull values have increased.** We would like you to insure your bulls left with us on bull development. All hybrids can be insured, they all have a permanent tattoo.

Accommodations:

The Hampton Inn, Lloydminster is our official host hotel 8288 44th Street. They offer a Special M.C. Quantock Sale Rate. Please call early, 1-780-874-1118, for reservations and ask for your M.C. Quantock Sale Discount. All rooms are \$119. Group Code: MCQ. **PLEASE CALL AS SOON AS YOU CAN**

Credit:

Credit terms are available in some cases. Contact M.C. Quantock prior to the sale for more information.

Payment:

All bulls purchased by buyers in attendance must be settled for on sale day unless prior arrangements have been made with Mac.

Liability:

The owners, the employees, the sale staff and representatives accept no liability for accidents that occur, although these are rare at cattle sales and therefore any persons who attend this sale do so at their own risk.

**Please Bring this Catalogue
to the sale!**

The Best Customers

Mac Creech, D.V.M.

We want to say thank you to the best customers in the world. We would be nowhere without your support. We have been at this for 50 plus years and have worked with hundreds of folks we now count as not just customers, but friends.

You have supported our unique program through droughts and blizzards, the BSE insanity, covid, good times and bad. You appreciated our ground breaking multi-breed and hybrid approach when most of the purebred industry did not... now it's all gone mainstream. Your continued support and the opportunity to work with clear thinking, "salt of the earth" cattle people is what makes every day a good day on our ranch.

Thank you.

our customers just

- Our customers "just love" our fresh, virgin two year old bulls, they're just not available many places in any numbers... we sell 400!
- Our customers "just love" that our bulls come from a big working cow herd raised under every day conditions... not purebred pampered.
- Our customers "just love" that we deliver bulls for free everywhere there are cows in Western Canada.
- Our customers "just know" that if there is trouble, we will look after them.
- Our customers have realized how easy it is to buy our bulls.
- 40% of our Western Canadian bound bulls sell Sight Unseen. Call me anytime to discuss this option. We'll provide references close to you. It's always convenient and simple.

Mac

"I called Mac and and told him what I was looking for, never had such a good looking quiet heifer bull before, thanks to Mac. We call him "rolly-polly."

- J. Dreydger

"Red Angus do exactly as advertised, low birth wt., high weaning wt. One of my bulls had a fatal accident on feed. Mac was very generous with the pick of replacement bulls available. Very satisfied."

-B. Greaves MB

"Sight Unseen bull showed up in good flesh, quiet enough to curry comb the day he walked off the trailer, after breeding bull is still in tremendous shape!"

- R. Glover, ON

"I bought 3 red angus bulls for heifers and was very pleased with the Calving Ease and temperament of the bulls. Bulls breed well over 200 plus heifers, no complaints, no calving issues."

- P. Folonoff, SK

"Bought Sight Unseen. I was surprised at how good he looked when Mac delivered him. Stayed in good shape through breeding, travelled great."

- D., Rutz, BC

"Our bull had a problem, you handled it fairly, we look forward to coming back. We enjoy making a family trip of it and looking over so many good bulls. Thanks for treating us fairly."

- T. Pletz, AB

"Love the performance of the bulls. We used the super black baldie on our solid black cows. zero calving trouble, nice color and lots of blaze faces!"

- D. Nixon, SK

"We are new to the business. Mac helped us figure out what we wanted and we got a good bull for the price we wanted. A while later we realized he was bigger than we wanted for heifers. We called Mac and he arranged a trade for a lower birth wt bull. Fantastic customer service and a pleasure to deal with, a family that sincerely wants to get the right bull to the right farm"

- T&T Hoy, BC

Mac Creech, DVM

Common Sense Data Practical, Fair and Honest on every bull and... in your language!

"Fairly, honestly and accurately presented on every bull" about describes my philosophy on the use of performance data. Over the many years I have tried to provide all and any objective information that I felt would help my customers select, analyze and fit our bulls into their various programs. Now, with 8 bull lines working within our own program, we have all the necessary genetics within the M.C. Quantock Livestock gene pool to completely service the crossbreeding needs of the industry. We can build and develop programs through one or a combination of our bull lines to maximize net profit on your ranches, recognizing that each farm or ranch is a unique situation with different advantages, disadvantages and needs.

The data presented varies by bull line and the state of our on-ranch records with each line. I still subscribe to some extent to the old saying, "If you give a good cowboy a bull's birthday and his weight, he'll tell you if the bull's got performance." Now with the technology available, we have developed new ways of analyzing cattle. However, simple rates of gain and adjusted weights are still very meaningful and easy to interpret by our customers. Birth weights are always taken within 24 hours of birth and presented as actual unadjusted weights. Current Breed Association EPD's lack accuracy on young bulls and are no help in selection for many cattlemen. We use current EPDs to select our herd bulls. We look for high accuracy data, Genomics is helping. That's our job as seedstock breeders. As a commercial cattleman, you need not worry about EPDs – just depend on us. The auction mart doesn't ask you to send in a list of your EPDs. He buys your calves because they're "big, stout hairy calves" that look the part and because of your good reputation. Keep it simple, cull the open ones, the problem ones and the ugly ones and you will make as much progress as is possible. Our bulls will help you get it done.

Tom Lasater who developed "Beefmaster" cattle once said that "Breeding cattle is a relatively simple task – the challenge is to keep it simple", and that statement has a lot of truth. Don't try to select for so many things that you go nowhere. Work slowly at improving the "weak links" in the cattle you have at home, through careful selection of sires.

1) Selecting your Bull(s):

Because the bulls in this sale are from the top of our production, most are above average for all traits in our herds and in most cases the line. We work with large numbers and select only the best. Please don't make the mistake of trying to find the perfect bull, in our experience he does not exist. Select bulls to improve on the weak traits in your cows by purchasing bulls that are strong in those traits.

2) Calving Traits: You will find very few bulls who are assisted at birth in our low maintenance grass calving program.

We have included here the age of the bull's mother, the calving ease code U – unassisted, E – easy pull, H – hard pull, MP – malpresentation, S – surgical. Also listed is the birth weight. The issue of birth weights is a controversial one. There is a high genetic correlation between frame, weight per day of age, daily gain, mature weight and birth weight. As you increase any one by selection they all increase. Our objective is to find those rare bulls, who have "TRAIT BALANCE." Those that balance the antagonistic traits of birth weight with post weaning size and gain. We are now uncovering bulls in our program in all breeds capable of doing this and utilizing them extensively as herd sires. It is perfectly reasonable to expect a mature cow to calve a calf at 7% of her body weight so a 1500 lb cow can easily calve 105-107 lb calves, a 1300 lb cow, 90-95 lb calves and so on. Don't overcompensate by going too small on birth weight, it will mean less weaning weight. The birth weights are actual weights taken within 24 hours of birth and not adjusted for age of dam. Level of nutrition and management difference may decrease birth weight by as much as 10%. The reality is they are probably accurate within 5% depending on whether the calf has nursed or not and whether it is slightly overdue or premature. Use them as a guide, but allow some flexibility.

3) Maternal Traits:

The performance of his mother with regard to fertility measured by her calving interval (a good beef cow should calve every 365 days under adequate management) – also the weaning data, a measure of the milking ability of the mother and the genetics of the calf. For improvements in weaning performance, select high ratios and high adjusted 205 day weights as well as weaning weight per day of age (W.D.A.).

Our Hereford, H-2, Red Angus, Black Angus, Red and Black Angus x Simmental and Red Angus x Gelbvieh hybrid lines all are focused on improving maternal and mainstream performance in your cow herds. Our Charolais, while used predominantly in a terminal role, nevertheless are still selected from good milk genetics within that breed to assure that they are not "one track" cattle.

To improve milk and maternal ability select a bull with a high maternal rating. If you sell your calves at weaning then you'll need a bull with high weaning data and weaning WDA, as well as good growth traits. To maintain a good reproductive and breed back percentage weaning, data should be closer to average levels. Too much milk can adversely affect reproduction if nutrition gets restricted.

4) Growth Traits:

A measure of the animal's ability to grow:

On All bulls of all breeds: We present adjusted weaning weights and on yearling bulls W.D.A as well. This measures both the bull's own genetic ability to grow and his mother's milking ability. (It can, however, be greatly influenced by management and environment). We present a blended gain which indicates his feedlot performance and grass gain over summer.

The 18 month weights are just a simple adjustment for age based on their weight at processing time. This is variable, however, and is an estimate only. (We consider it to be plus or minus 75 lbs.) It is useful however because it closely relates to slaughter age and weight for most cattle.

Pelvic measures can be supplied on request should any customer require it.

5) Fertility:

We have measured all the Two-Year-Olds' scrotal circumferences and then presented the data as actual circumferences. As testicle size is very highly inherited and reflects the bull's breeding capacity, the measurements will allow you to compare the bulls for this characteristic. It should be emphasized that all the bulls in this sale are much more than adequate in this department with many being excellent. Testicle size has a high correlation with early puberty in half sisters and daughters and hence is a trait very important to your profit. Our management and culling practices put pressure on our herd to be very fertile even though fertility is a trait of low heritability. All our Two-Year-Old bulls are semen tested.

6) Carcass Traits:

While carcass is not our primary focus on our maternal mainstream lines, we do want as much muscularity as possible as long as it does not adversely affect reproductive capacity.

7) Frame Size:

We have discontinued providing frame size information. The only commodity any of us get paid for is weight. Most cattle in the industry at the present time have enough frame, some in fact have too much. **My Dad always said; "It's not how big they get, but how quick they get big that counts."**

our cows can't Read!

Our cows can't read... they don't know they're purebreds but in fact they are... ALL OF THEM. All our purebred lines are registered purebreds, the bulls are registered and the papers provided. We use many of our cows to produce Hybrid bulls but we still register more purebred cattle than most anyone in the country. As we said our cows can't read, no-one told them a purebred cow should be treated different than a commercial cow AND THEY'RE NOT!... NO PUREBRED PAMPERING HERE!

Perhaps the best breeding decision a commercial producer will ever make is the choice of a seedstock provider. Find someone whose breeding objectives mirror your own, who operates in an environment similar to yours, who can help you benefit from heterosis and can understand your objectives and help you select the right bull.

Burke Teichert

Ranch Consultant, Retired General Manager, Deseret Land & Cattle

LET US FEED HIM 'TIL YOU NEED HIM!

\$150 BULL DEVELOPMENT PROGRAM

We have established a widely accepted program to develop all 2 year old bulls here at the ranch to better serve our customers. We will take the bulls home after the sale and feed them until early April on a silage based ration to gain about 2 1/2 lbs. per day. Delivery will be throughout the month of April, area by area. The price for this service is \$150, payable at sale time. It's a real value as it includes board, a semen test and central point delivery.

We recommend that you insure the bulls on development. Good rates are available from our agents.

How our bulls are developed...

We sell all summer born two year old bulls. We believe they are the ideal age and we develop them to maintain soundness and longevity.

- Calves are born mid-May until the first week of July - grass calved - checked, tagged and weighed only once per day. No night checks, cameras or calving barn. (with this system problems eliminate themselves.)
- We wean in November, bull calves are backgrounded in big groups till spring on a silage based growing ration.
- By spring our bulls are well grown out but not fleshy... just perfect to take advantage of our grass.
- Bulls are sorted by breed and size into groups of 30-50 bulls.
- Bulls go to our management intensive grassing paddocks from late May or June until late October.
- Water is provided by solar systems or surface piped fresh water.
- We move bulls to fresh grass every two days all summer long.
- The pasture is good quality, everyday, it ensures they grow well all summer. A real bonus here is that they are used to a man on foot and constant checking.
- As summer progresses we supplement the bulls with a low energy, high protein pellet made specifically to our specs and made of pea and lentil hulls. No starch, high fibre with added minerals and vitamins. (about the nutrient content of good alfalfa hay)
- In late fall the bulls are brought to our bull lots and placed on our silage based bull development TMR (total mixed ration.) This is ideal because every mouthful the bull takes he has the right proportion of all nutrients, no binging on just grain. No barley or coarse grain is fed, just our bull development pellets.
- Our rations and protocols have been developed over years of experience to bring you the best, most durable bulls possible.

How our cows are managed..

- We maintain a large cowherd managed under commercial conditions to minimize cost and time, every cow is a registered purebred.
- Cows calve in May and June on stock piled grass - we do not feed our cows during calving...they rustle!
- They are grass calved in groups of 200 or so checked by one man once per day to tag and weigh.
- No night checks, cameras or calving barns.
- Calving is what our cows do...not what we do! (with this system problems eliminate themselves)
- Cows and sorted (paired out on horseback to have a good look at feet, udders, milk etc.) in late June to our breeding pastures.
- Our pastures are spread over 150 miles so nearly every one goes on a liner going somewhere.
- We use all natural service...Bulls go out August 1 for 60 days.
- Calves are weaned starting mid October to mid November group by group.
- Cows are left on grazing for as long as possible into fall.
- Cows move home and are wintered on standing corn in groups of 200 per quarter controlled with electric fence. Our objective is 200 cow/days per acre, they lick snow for water.
- Our cows go from the calving pastures to summer grazing and breeding, make a short stop at the home ranch for weaning, then on to the standing corn. Corn to grass, grass to corn and on it goes, with no supplement feeding and no hauling feed or manure. I just believe that as soon as you put machinery or diesel fuel between a cow's mouth and what she eats, it does nothing but cost money.

older Red Angus Bulls...

All the good old Angus traits and "no darn trouble." Our Red Angus are developed from mainstream maternal lineage. We've stared birthweight in the eye and backed it down.

Our Red Angus herd was established in the 60's, we are one of Canada's Pioneer Breeders. Our bulls have introduced the red influence to countless commercial operations across the country.

Our disciplined program has for 48 years never compromised birthweight, thriftiness or vigor. We've bred moderate frames, good cow traits, easy keeping and light to moderate birthweights into each and every bull we sell. Ours are reliable, predictable bulls; ideal for cross breeding with volumes of bulls for heifers and bigger stouter bulls for cows.

The offering features as many older bulls as anywhere in the country. 75 Summer Two Year Old Bulls.

Use our red bulls to easily calve heifers and still get a "darn good calf" to sell or keep. Raise your own Red Angus cross replacements with the good maternal quality our bulls offer. If your cows have too much exotic, use our Angus to moderate frame, make 'em easier to feed and increase carcass quality and feeder demand.

Share and benefit from our experience and 48 years of selection, volumes of records, predictable birth weights and performance uniformity. Ranch raised Red Angus that'll do the job, never complain, and give you no grief. 65 plus solid bulls, buy one or you can select uniform half brothers in volume. Great red bull value from Canada's Bull Supplier.

Herd bulls with volume, length and ample testicle.

Two Year Old sale bulls with volume, thickness but still calving ease... like peas in a pod.

What you really need

Mammas like this! Deepsided, high volume, easy-keeping females with trouble-free udders and ample milk.

Why buy yearlings when you can have these at no more money!

Last Year's Sale Topper to Thompson

Long bodied, sound structure.

Red QLC Quantock 908S
Red QLC Quantock LT Miss 792T

We selected 2484E (or Rollie 2.0 as we call him) to use as just a yearling after his sire, Rollin Deep, went down. He did a great job, left a lot of bulky, big middled cattle. You will appreciate his sons. He saw heavy use last summer on our second calvers. Last year we said more sons were in the pipeline and we weren't kidding. There are some "smokin' good" sons this year, and lots of them!

Progeny Profile: Avg. BW 78 lbs. • Big Middled
• Bulk & Depth • Beautifully Balanced

RED QLC QUANTOCK 2374 2652G

CALVING			MATERNAL	GROWTH		FERTILITY	
Age of Dam	Calving Ease	Birth Weight	Adjusted Weaning Weight	Composite of Summer Grass Gain and Test Gain Combination of:		Adjusted 18 Month Weight	Scrotal Size
documents productivity	U - unassisted E - easy pull M - malpresented	actual wt. taken within 24 hrs. of birth	adj. for age of calf & dam	gain on pasture with late season supplement	gain per day while in our bull test	a good reflection of overall performance	in cm
5 yrs.	U	89 lbs.	603 lbs.	3.2		1518 lbs.	38

The data we have presented is as comprehensive as possible and will enable you to select bulls to ideally suit your needs. We have listed each bull's Age of Dam (A.O.D.), Calving Ease (C.E.), Birth Weight (B.W.), Adjusted Weaning Weight (A.W.W.) (composite of grass gain and test gain). Projected 18 Month Weight and Scrotal Size. The bulls have been fed a silage, pellet ration designed to provide a modest gain. The bulls were weighed in late November and a gain calculated from grass turnout till late November. We have provided photos to give you an impression of the excellent quality and performance on offer. They are backed by our unconditional guarantee. All are guaranteed breeders. Your attention is directed to the bull development option which you may wish to consider. All bulls are semen tested.

We will provide pedigrees on all our Red Angus purebred bulls.

ONE GAIN FIGURE

Our bulls now spend longer on grass so our test gain in lot was too short to be significant. The one figure encompasses both periods. To help give more accurate gain data, we have presented "ONE GAIN FIGURE" only. It takes into account Summer Gain on Grass plus the first month in our bull test, from grass turnout to late November.

Summer Reds are the answer...

They're bigger, stouter and tougher than the yearlings you'll buy other places. They'll breed more cows (even the big ones), hold their condition, take less management and be less worry and trouble. They've been gently and slowly developed on grass, so they last a long time in your herd. They'll breed circles around a yearling and they're not the "leftovers" like most 2 year olds you'll find. They really are the answer. "Perfect Age" bulls - 22-26 months old at breeding time. **WHY BUY A YEARLING WHEN YOU CAN HAVE THESE AT NO MORE MONEY?**

"Customer service has been awesome. Past bull purchases produced good quality calves and have enhanced my herd".

-W. Magneson, AB

The consistency of our cow herd is a result of using MC Quantock bulls over the last ten to fifteen years.

R. Quist, AB

Different cows...Different Day. We brand and pasture sort all of July

Summer Two-Year-old Red Angus Bulls - Registered Purebreds -

RA-2456

RA-2477

This age group of bulls are the best there is from a function standpoint. These are grass-calved bulls from a "swath grazing," "corn stalk chewing," low input cowherd which never gets close to a corral. These bulls are 2-3 months younger than most two year olds. The bulls are weaned in late Nov.-Dec. backgrounded then put on grass the second summer. A little extra age always helps. We now have our whole cow herd calving in May/June. It allows us to "low input, low maintenance, grass calve with minimal attention." We ride these cows once per day at calving to weigh and tag. We check the heifers twice per day but never after 5 pm! **Calving is what our cows do, not what we do.** These bulls are from cattle that know how to be successful on their own. They're low maintenance and trouble free, but still industry leading in terms of conformation, performance, pay weights and power. They'll compete with the best. These bulls were in fact born on grass 75 miles from Ranch Headquarters. No calving barns or cameras necessary. The genetics here are uniquely our own. We have worked away for years to build these cattle starting in the late 60's. At that time I would not have believed that we could create cattle with this much payweight and power, with such minimal birth weight and convenience.

one Bull At A Time

Although we sell 400 bulls in one afternoon, we sell only one bull in the ring at a time. I have never been comfortable being forced to bid when two bulls are sold "choice." We just don't think it's fair to our customers. So while we sell more bulls than anyone in the country, we do it "one at a time."

Herd Health Program

We maintain a practical, effective herd health and vaccination program for our own and our customers protection. Calves receive a vaccination for blackleg at two months of age (spring turnout). They receive a second blackleg plus vaccinations for hemophilus and pasteurilla at weaning time (about 5 months of age). Prior to puberty, before reaching a year, they are vaccinated for IBR, PI3, BVD, BRSV with a live virus vaccine and they receive the last booster for blackleg (this should provide life long immunity).

The cowherd receives annual prebreeding vaccinations with a live virus vaccine, generally Bovishield Gold for BVD, IBR, PI3 and BRSV. All cattle are treated with an Ivomec product annually, the sale bulls generally twice prior to sale.

We do not vaccinate for foot rot because we have not found it to be effective enough, but should you require it we can do it before delivery. Insurance now requires 2 doses of foot rot vaccines to provide coverage for chronic foot rot. We recommend vaccinating your new bulls with the products you use at your first opportunity.

Polled vs Horned vs Scurred

There are some misconceptions or misunderstandings with regards to polled cattle. I will try to simplify and clarify this with a few simple points.

- 1. The polled gene is dominant to the horned gene.*
- 2. Homozygous polled means all offspring will be polled regardless of breeding.*
- 3. Double polled means both parents are polled; this increases the likelihood of the offspring being homozygous.*
- 4. Scurs are the result of an independent gene unrelated to either the horn gene or polled gene. For the most part scurs are loosely attached to the head.*
- 5. Scurs is sex linked being dominant in bulls and recessive in heifers. That's why if you think about it we see a lot of scurred bulls but very few scurred females. It is also the reason why scurs do not present a problem in your cowherds. Scurs are not a big concern as they seldom show up at weaning time and don't affect your calf sales.*
- 6. A horned animal may carry the gene for scurs but it is masked by the horned gene, making the scurred gene hard to eliminate from a population.*

Thick "Super Baldies"

Red Angus x Simmental Bulls

We've harnessed the best of both breeds. Incredibly **beefy, thick bulls**, they pack awesome payweight on disciplined moderate frames. They have all the convenience of Red Angus; **moderate consistent birthweights** (85-95 lbs. almost without exception), **"easy fleshing"** (they'll hold their condition in the tough going) and on feed they're "quick fashers" with bold hybrid performance (4-5 lb. gains are common place). The Simmental blood gives them that essential "touch of continental muscle" you need today, as well as adding milk and growth to the blend.

Our "Super Baldie Bulls" are an industry success story, over nearly 30 years. They **add milk and muscle** and are "right sized" to give you no calving problems or management nightmares.

Best of all, they'll give you Red Baldie females for replacements you'll want and need to keep. Too much exotic — they'll beef 'em up.

You can find a few Red Angus X Simmental bulls other places... but what you cannot find is the volume, uniformity, quality, and selection potential available from M.C. Quantock. You can spend a lifetime infusing that blend of Red Angus Simmental or you can do it **"one shot"** using our Super Baldies. You'll get beautiful "Angus Type" calves with "muscle and snap." Your steers will top the market. Your heifers will be the envy of your neighbours.

...the oldest and most successful hybrid program in the industry...
Unrivaled in numbers sold and customer satisfaction.

SB-2471

Summer Two-Year-old Super Baldies

SB-2536

SB-2729

Here is more production from our May-June calving red cow herd. Our customers "love-em". Big bodied, soggy, deep, hairy, powerful bulls. Weaned late, backgrounded then summered on grass. It doesn't get any better. These bulls are an industry success story. They make believers out of skeptics and real cattlemen real money everyday. For years these bulls have highlighted our sale. Bull after bull, incredibly uniform, they sell "all day" to our cowmen customers because for over 25 years, they have just worked. They do exactly what we say and sell year after year to repeat customers. Sired by the best Fleckvieh Simmental bulls money can buy. Grass calved with minimal attention from our own purebred red angus cows. Powerful genetics on both sides of the pedigree. We move our seedstock red cows back and forth between our purebred and hybrid programs. We're using some of our best cows year after year in this program and it shows.

We are sorry for the "snow drifts" on their backs. WHEN the weather breaks we will post lots more photos on our website.

Sires to the Super Baldie/H2 Bulls

"Super Guppies"

Red Angus x Gelbvieh Bulls

Super Maternal!

"you'll love a little Gelbvieh on the cow side"

We think he's the best GV bull walking and have never found one to replace him!
Our Herdbull - McCoy Leadoff

Our "Guppie" bulls are all summer two year olds!

"Super Guppie" bulls are a great crossbreeding option. A blended composite of Gelbvieh and Red Angus. Super Guppies have a little more "exotic muscle" than our Super Baldies but are still built from all maternal cattle. Gelbvieh have the carcass, the early sexual maturity and the growth. The Red Angus blood provides the hair, thriftiness and fleshing ability, while moderating birth weight and makes them "smooth Polled."

Use our Gelbvieh x Red Angus bulls as the third option in any crossing program and maximize your hybrid vigor. They're cowmen's Gelbvieh that will work the big range country and fit your management.

Our customers love a little Gelbvieh on the cow side. Our Super Guppie bulls have really found their stride in the past few years as our customers calve their daughters and recognize how well these bulls fit their crossing programs. Gelbvieh hybrids with hair, moderation and uniformity.

They've gone "mainstream," the industry now calls them "Balancers" but we've been making them for 25 years!!

We have really appreciated working with Mac and Pat and their great program and customer service. Since switching half of our bull battery to Super Guppy Bulls we were able to maintain a calving ease program plus able to keep the terminal side going forward on the steers with performance and maintain a very strong maternal side for our replacements.

Broad topped, deep Herefords...

- Don't overlook the breed that built the industry -

Established in 1951, our Hereford herd benefits from 60 years of experience, volumes of performance records (since the 60's), the school of "hard knocks" and the instincts of a cow man. Our Hereford bulls are "just right" to deliver what you need and expect. **Broad topped, deep sided bulls packed full of natural thickness** on moderate frame sizes. We offer balance and goodness in all the money making traits. Our bulls deliver moderate, predictable consistent birthweights and have been selected over a very long time for large testicles and early maturity. Trouble free... "you bet," our Herefords have been selected for years for good udders you never have to touch, because you don't have the time and you don't need the hassle.

Use our Hereford bulls to add the good Hereford traits your dad took for granted. Deep, thick hair coats, easy keepers that'll get by without the barley bin and **dispositions that make cows a pleasure to handle - not an ordeal.**

Use Herefords to add British blood to those exotic cows and be ahead of the game as the packing industry demands the British/Continental blend. Our bulls are durable, long living and tough; managed like your commercial cattle, then grown out on grass.

You won't find any "big fat ton bulls" here, but what you will find are bulls that have never seen "hot feed" and pampering. Bulls that will last and last and be bigger not smaller at 4 years than the day you bought him.

All our Herefords sell as Summer Two Year Old bulls in their working clothes. Reasonably priced bulls, available individually or as uniform groups of half brothers.

Rediscover what your dad knew! Herefords work and are a pleasure to own.

The Hereford breed does not get the credit it so richly deserves for its contribution to Canada's crossbreeding mix. Half of almost everything is Hereford. Whether it be Char X, Simmental X, Limo X, Black or Red Baldies, an important half is the Hereford half.

~ All Hereford bulls purebred and papers provided ~
~ All our bulls are now dehorned ~

**All bulls
dehorned**

**"Durable Deep-Bodied
Broad-Topped Wide
Bodied Bulls"**

**"Much of our Hereford
herd is now used to
produce our H2's"**

**"To add British blood use
Herefords"**

We call this bull "Whalebelly". He is massive in his girth and depth. Stout sons will sell. Real "old time" herefords, close to the ground, big pay weight.

"Impressed with the level of individual customer service! Mac took the time to call and talk to us about our program numerous times."

Just a 65 BW. We bought him as a heifer bull. Sires pigment and length. You'll like his sons.

"The sale was phenomenal, lots of bulls to choose from and efficiently run. If you can't find a bull at your sale you can't find a bull anywhere."

- D. Dixon, SK

Summer Two-Year-old Hereford Bulls

Hereford Summer Bulls

Most Herefords are sold as big fat two year olds. They've spent way too long at the feed bunk, 500-550 days of hard feed in most cases. (Incredible when we only feed steers for 100-150 days to slaughter.) If you're tired of two year olds that are too big and too fat or yearlings that are barely big enough, our summer bulls are the answer. Gently and slowly developed on pasture, easy keeping, they'll hold their condition for life. Our summer bulls will be 22-26 months old at breeding, just the perfect age. They're mature and will do everything an older Two-Year-Old can and a darn sight more than a yearling will and best of all they'll last and last. They're the answer to the "Hereford Dilemma."

These "Meat Wagons" sold in the last few sales...

Summer Two-Year-old Hereford Bulls - Registered Purebreds -

HH-1678

HH-1681

Some of our best Herefords. Our Herefords are all May-June "Summer Twos." They are thick, low set bulls. These bulls are fleshy, quick gainers, they're low set like all Herefords should be. These will really work in your crossing or straight bred programs and as a PLUS will be full two year olds going to your cows next summer.

THESE BULLS REALLY ARE DIFFERENT FROM THE COMPETITION. They are "soggy," smaller in frame (just right in fact) and will not get too tall like many Herefords today. These will not sire 1600 lb. giant Hereford cows. **They're built to "cross" in fact, Herefords are the new crossing machines unrelated to most cow herds.** Our numbers are not large due to the fact that we use many of our hereford cows in our H2 production program. Not a lot of bulls but some very good ones. **We are sorry for the "snow drifts" on their backs. WHEN the weather breaks we will post lots more photos on our website.**

H-2 Bulls...

For 25 years, customers have told us "the best Simmentals I ever used were the first part-bloods."

Here is our Hereford/Fleckvieh 2-breed composite line. Real beefmakers, loaded maternally but bred to simplify and sustain the Hereford/Semi influence in our customers' herds.

Produced on the home ranch using mid-aged proven Hereford cows and beefy, low set, pigmented Fleckvieh sires; these bulls really offer something unique. Enough age to breed a lot of cows, solid maternal genetics and bottom line performance. We call them "H-2's" - They're hummers.

These potent composite bulls are being used on Hereford x Simmental cows, as well as black and black and red baldie cows with great success. Anyway you fit them in your program, they'll make money.

These bulls just work so well, they make repeat customers out of everyone who buys one.

"Our Hereford and H-2 udders are as good as Angus."

These bulls really work...

...past year's customers are coming back for more.

" OUR H-2'S ARE THE BEST WAY TO ADD THE WHITE FACE TO BLACKS... THEY ARE ALL DILUTER FREE, SO NO GREY CALVES"

H2 4059

"Our H2 bull spent his summer in the dry Battle Riverhills on drought grass. His condition only went up."

- E & C Bullee, AB

Summer Two-Year-old H-2's

H2-1649

H2-1617

These bulls come from our home ranch May-June calving Purebred Hereford and H2 production cows. The cows are run a "little rough"... swath grazing, corn stalk chewing, low input, never close to a corral. These bulls are weaned in November-December, background fed, then back to grass. The performance of this pen of bulls is solid. As a group they are as good as it gets. We are in the process of adding new "semi" sires each year. This offering is convincing. Think about how they might work for you. [If you were considering Herefords, pay attention to these bulls. They can do everything a Hereford will and more. More muscle, more weight, more maternal, more pigment.](#)

Ideal for black base cows. All sired by non-diluter Simmental sires (no smokies or rat-tails).

H2 Bulls

Beefy, big bodied, Black Angus...

All Summer 2 year old bulls!

- Papers provided on all purebred bulls -

All the good old-time Angus traits - volume, beefiness, quick fleshing, dependable and durable. Add the Black option to your program with no surprises with our traditional solid real Black Angus. Broad, deep, and beefy two year olds. Black heifer bulls. Black cow bulls. They're black bulls like black bulls should be and they're as good as you'll find. We've had a "love affair" with Black cows since the 60's when we used Blacks to establish our highly successful Red herd.

Ours are easy fleshing Black genetics, yet they still have frame and length. Just like our Red Angus, our Blacks are light at birth, then really grow when it counts. Angus convenience, the black color and no darn trouble. We're your best Black bull opportunity. All older bulls, bigger, stouter and tougher than yearlings. Why go anywhere else?

M.C. Quantock Distinctive Black Angus Program

We began a search for the right opportunity to enter the black business 25 years ago. I have had a "love affair" with black cows since the late 60's when we used blacks to establish our highly successful red herd.

We based our program on canadian genetics from the Angus Acres herd. We have taken the Angus Acres base cows and moved forward as we build our own distinctive blacks. Like all our other projects, these black cattle are built for our commercial customers.

We methodically use high maternal bulls of the type we like (easy keeping, deep bodied, high milk moderated blacks) to create volumes of half sisters which are now producing our best cattle.

Using the same selection priorities as our Red Angus and driven by the advice of our commercial customers, we are now producing uniform, high quality, black bulls in volume. As a seedstock breeder, it is rewarding to now see our 25 years of work result in bulls like this offering. The commercial industry will appreciate them.

Insufficient data to report.

This young "powerbull" we call "Totally Deep". He just does it all. Search out the green tags. Maybe the most impressive sire group and M.C. Quantock bred for generations. Last years "Deep Boys" were a standout and this year's are just as strong. Massive girth and body...so easy fleshing you couldn't keep them thin if you tried.

"We have bought bulls over the years and they always meet our expectations. Bulls we got this year are very good The black baldie came home from breeding fatter than when he left."

- L Adams, SK

Insufficient data to report.

We bought Emblazon from Nordal as an outcross bull. We appreciated his big body and flawless structure. He is an impressive bull to study in the flesh. Thick, meaty with a "low center of gravity." You will love his sons. "Beefy" balance with lots of body. His sons have been popular in the past. Look for the yellow tags.

C

C BAR H MINDBENDER 1G
 Bar H Mindbender 141D
 RRAR Georgina 47E
 S Summit 956
 HF Tibbie 934
 JL Upward 225D
 MVF Georgina 176X

Mindbender was bought as a "2 way" outcross bull. He has been used successfully on first and second calvers. He's a "breeding machine" As a yearling in a DNA field he was with 3 other bulls, 90 cows, and sired half the calves. His sons "walk down the middle and don't make any mistakes". -Blue Tags

"Got the bull home Mac, he's what I figured he would be. I'm pleased with him, all kinds of length and depth to him. A guy never knows buying 'sight unseen.' Thank you again."

- M. Minshull, MB

 QLC Quantock Miss

5787G was a "use and roll the good ones" bull. Used as a yearling, his calves run with the best of them. Look for lime green tags. Now working for Donalds in Cut Knife, SK

Black Angus Reference Sires

E QLC QUANTOCK 5111 5634C

QLC Quantock CH 5111W

QLC Qunatock 5137 MS 5514A

Progeny Profile: Avg. BW 63.6 lbs.

This is a bull we call "New Guy" for some unknown reason. He is used on heifers primarily. He was a standout bull with a 61 lb. birth weight and "sweet" productive mom you just love. He has bred nearly 50 heifers a year by himself.

"Bulls arrived ready to work, good working condition. The Black Angus bulls have nice length, a nice Angus head and shoulders and a nice full ass end."

- D. Willman, BC

"Good bulls, good price, ready to go to work"

- Quiet Creek Ranch, BC

BA-5694

BA-5733

Black "Super Baldie" Bulls...

"Keep 'em or turn 'em black and beef 'em up in one shot"

Our "Baldie Bulls" are a real success story. They add milk and muscle and are "right sized" to give you no calving problems or management nightmares. Beautiful "Angus type" calves with more snap, muscle and hair..."market topping blacks".

The same great crossbreeding machines as our Red Super Baldies... but Black. A perfect option on Black base cows, Herefords or Semi X. Blacks with a touch of exotic muscle, growth and milk. These bulls have been carving out a "niche" and carving up the competition for years. **You just can't find 'em anywhere else. Sired by the best semi bulls money can buy.**

May two year olds and "more than ever"

**Identical
"but black"
to our highly successful reds.**

**Balance, muscle, milk
and a whole lot more!**

All Non-Dilutors So No Smokies or Rat Tails

BB- 5890

Summer Two-Year-old Black Super Baldie Bulls

BB-5649

BB-5791

This is an incredibly strong offering of two year olds; it contains some of the most appealing bulls in the sale. Big, broad and black, big gutted, deep bodied beef bulls. Our customers continue to appreciate these older bulls. These bulls work well anywhere siring black baldies with a touch more muscle and hair. This is, maybe, our best offering of black summer twos. They are all produced from our best "Simmental" sires and our seedstock purebred black cows. Cowmen of every breed will appreciate these bulls. "So darn good." You can't sort just a few good ones. Where do you start?

"Chunky" Charolais Bulls...

Chunky but smooth 2 year olds

We're cowmen first and these are cowmen's bulls. Our objective in Charolais bulls is to provide our customers bulls that maximize the Char cross advantage in feeder calves and minimize any problems. Our bulls are thick bulls but they are still smooth bulls. The bulls have rapid early growth which you need and the two year olds will not be too big. Our Charolais are built for the ranch trade with very moderate birth weights and unquestionable soundness - white bulls that will last and last. We deliver what you asked for: lots of hair, so you can sell those "deep coated, good doin'" tan or silver calves and top the market; good dispositions because we've all got families that help; unquestionable soundness, because some other Charolais bulls don't last; moderate frames because some others get too big.

Our Charolais pack lots of muscle, are long bodied, smooth and not real tall. **Gently grown out and sold in perfect working condition.**

Charolais are still the best terminal sire for a British cross cow and **the char cross premium at market is not to be denied.**

~ All Charolais bulls purebred and papers provided ~

"Two year olds that are thick and heavy but not too tall."

"We deliver the Charolais bulls you asked for."

"Solid, smooth bulls."

CH-682

Charolais Program

We have been a reliable source of Charolais bulls for nearly 30 years. Because our roots run deep in the commercial industry, you can depend on us to continue to be your reliable source of mainstream Charolais bulls in volume. For many years our Charolais were cooperated produced but the ranch bred 175 purebred Charolais last summer of our own. The white herd is developing that "shot from a gun" uniformity that all our other lines of seedstock are known for. Our Charolais are now grass calved in May-June and are younger than most twos. They are real "ranch" bulls calving on their own with only once per day checks. They are the kind of cowman's Charolais we can all use. Our Charolais "Summer Twos," run out on grass all summer to assure soundness. This marks the sixth year we will sell white bulls born and raised on the home ranch. Cody bought the cream of the old Ray Murphy FMX cowherd to add to the mix here at MC Quantock. **This set of bulls are as good as any we have ever sold, one look over the fence sale day and you will agree.** "Hairy, meat wagons" raised here along with our other lines. We've made 'em uniform, we've made 'em hairy and we've made 'em convenient. You will only be able to tell them apart by the ear tags. Cody knows his bulls and this little cowherd "inside out" so talk to him sale day.

Cody

"Amazing customer service, fantastic quiet bull, we were worried he would be high strung, but is the very opposite. He is a laid back, gentle smooth thick hipped bull."

- K & R McRae, ON

"Excellent service, super nice people to deal with, can't wait to see our calf crop this spring as this is our first bull. The other bull never worked out, so Mac replaced him with a credit for the next sale. When we had trouble, Mac offered to bring us another bull but we were ok. Thanks."

- O. Kaminsky, MB

Bar Diamond Hank 22M

FMX Silver Rain 837K

MXV Cougar Hill Hank 720G

Bar Diamond Miss 47G

MNE Galaxy 54G

FMX Ryans Fire 383F

This is "Old Hank". He topped our sale way back in 2014 to Rosiechucks. I always thought he was the best we had ever sold. When the FMX cows came to the ranch we leased him for a year then bought him and brought him home. He was the sire of the "mind blowing" bulls we sold in our 50th anniversary 2018 sale. He just plain sires everything you need in Charolais.

- Meaty and Thick • Moderate Frame
- Lifelong Soundness and Convenience • Hair Hair Hair

Angle H ABC Maggie 895A

This is "Cypriot" - We made history in the Spiritwood Auction Mart the day we bought him at \$17,500 but he has been worth every penny. He was used on heifers for several seasons, "calves like a dream". Sons are hairy thick bulls, moderate in frame and birth. He's one of the good ones.

"Very happy with how easy bulls are to work with. Really enjoy Mac's insite into Cattle Market."

- M. Jacklin, AB

Becks Golden Girl 13Z

We call him "Braxton" after his dad. We bought him at \$26,000 in the Beck/McCoy sale in 2018, then shared him with Horseshoe E. He sires just one big powerful bull after another. He's been used hard at two operations for 3 years and looks great. He sired some good ones at Horseshoe last year and the big power "peach" tags will impress!!

"Very happy with the level of customer service and time that went into helping with choosing a bull"

- C. Mortens, MB

"Sight Unseen bull looked good on delivery and stayed in real good condition right through breeding season. I look forward to seeing his calves come spring!"

- D. Shankowsky, SK

CH-746

Our sight unseen program is...the most successful in the industry and here's why...

SATISFIED CUSTOMERS!

"We bought 2 Hereford bulls sight unseen. The whole process of getting such good quality bulls was absolutely painless, right from the first conversation to delivery. These bulls were everything we expected and more. Easy fleshing, they maintained their weight through breeding." - **G&S Clark, AB**

"I'm not a big cow operation, have bought all my bulls Sight Unseen and were put on bull development and grow like weeds. Only 1 problem... I drive my wife crazy replaying the sales DVD." - **K. Kosheluk, SK**

"There were 5 bulls that came off the trailer, I picked the one I liked best in my head. Not knowing which one was mine. Once they sorted them the one I picked ended up in my trailer. Thanks a lot. You guys got me the bull I would have picked myself and you did it Sight Unseen." - **C. Tonneson, AB**

"Mac and the video reassured me that I was making a good decision buying Sight Unseen. When I finally received my bull I never knew that kind of quality was around for a reasonable cost. Perhaps the best bull I bought. Look forward to doing business again." - **K. Victor, AB**

"Sight unseen program and bull were exactly as described, easier than travelling a lot of places looking for the right bull for our herd." - **J. & B. Tripp, ON**

"The sight unseen purchase program you offer, coupled with a rock solid reputation, unquestioned convenience and a large battery of quality affordable sale bulls has again made bull buying from your ranch a pleasure.

Thanks again!" - **J. Comrie, MB**

"The sight unseen bulls seem to be easy fleshing and quiet. The Hereford bull was extremely good."

- **J. Mizen, ON**

"We have used your sight unseen purchase program for many years and have always been satisfied with the quality of the bulls and the performance. Thank You!"

- **G. Morrel, AB**

THE BLACKS CROSSING BIG QULLY CREEK ON THEIR WAY TO BREEDING SORT

Absolutely FREE Delivery - Tentative Delivery Routes

Routes may change depending on bull distribution. Routes indicated are usually run in April with early deliveries done after sale if necessary. Some bulls may be interlined with other carriers where necessary. Bull Development bulls will be delivered throughout April, area by area. By April 1 have a spot for your new bulls.

Mac Creech DVM

Our Guarantee

- Pretty Darn Simple -

In the unlikely event you have trouble... rest assured I'll look after it right away... no hassles or disputes. If you purchase our bulls, you'll have a bull to breed your cows no matter what happens.

We semen test all bulls and evaluate them for breeding soundness. Simply put... they're guaranteed to work or they'll be replaced. We always have loaners available to help out if needed.

If you have a bull down, we'll meet you halfway anywhere in

Western Canada, 24 hours a day with a replacement, because when you have trouble and you've got cows to breed... you need bulls, not excuses and time wasted. (We recommend insurance coverage for breeding or physical injury, especially since bull values have increased. This can be purchased sale day). All warranty and responsibility is limited to replacement of the bull in question.

Mac
