

Coming Two-Year-Old and Yearling Red and Black Angus and Hereford Bulls
Pugh Farms and Customer Raised Angus Influenced Open Commercial Females

2021 SPRING BULL SALE

TUESDAY MARCH 16, 2021 / DRYLAND CATTLE TRADING CORP / VETERAN, AB

All of us here at Pugh Farms would like to start off the welcome by inviting you to be our guests and join us for lunch prior to our Spring Bull Sale in Veteran at Dryland Cattle Trading Corp on March 16th. We are thrilled to once again be working with the fantastic staff at Dryland as well as our extended sale staff of Justin Gattey, Graham Schetszle, and Clinton Laffin. These gentlemen as well as the staff at Dryland know the cattle industry and understand the type of genetics we are producing so feel free to contact them with questions about the offering or ourselves at Pugh Farms anytime.

We believe that the process of breeding seedstock need not be any different then the genetic advancement of a commercial cattle herd. Our belief in this thought comes from our experience through the years of breeding, grazing, feeding, culling, and developing our own commercial herd alongside our purebreds. Environment is a major factor that effects management of a herd and we believe that our environment provides a great opportunity to develop and test our genetics daily in a real-world setting. Our terrain along the Battle River provides an opportunity for continual testing of feet and leg structures as our cattle are expected to graze slopes on hard native grass where the elevation changes nearly 500 feet daily through their grazing patterns. As cattle are naturally drawn to grazing through instinct, we strive to foster this instinct even into the winter months when our pairs are turned out on swaths and standing corn the first part of winter. We have been able to push our weaning back while starting the backgrounding process of our calves alongside their mothers, further allowing grazing instinct to develop. As our weaning has been pushed farther out, we have seen an increase in weaning gain as well as BCS maintenance on our cowherd while providing the opportunity for improved soil health by having our cattle winter outside of a corral scenario. Longevity is something that we feel ties to profitability in a cowherd and we are constantly testing the productive lifespan of our cowherd. A few of the bulls in the sale this year were raised by dams entering their 14th lactation; as well as one of our herd bulls, Glacier 114U, passed his semen test last summer and was exposed to a group of cows for his eleventh consecutive season. They don't all last forever but it is intriguing to discover and then continue to build off of the ones that last longer then most. Calving ease with weaning growth has and will always be another focus high on our list of values. We know that breeding for calving ease and expecting above average weaning growth isn't something that happens overnight. We have consistently used our herd bulls on heifers their first service, calved those females out, and then presented the sires to a breeding group of mature cows if everything went as planned through calving. We don't creep feed our calves as a general rule of thumb and no cattle in the offering this year were provided supplementary concentrate through the summer months. We aren't against creep feeding, and in times of drought and extreme environmental weather conditions we will utilize it as a tool. We prefer to see how our calf crop develops year to year without further supplementation and rely on their grazing ability combined with their mother's maternal quality to help us sort them for potential candidates to enter the bull sale offering groups. With running our commercial cowherd in unison with our purebreds we are able to compare the value of hybrid vigor to the growth potential of our purebred cattle, further pushing our purebred cattle to exceed expectations to keep pace with the growth marks that the hybrid vigor provides the crossbred cattle. Maternal quality is forefront in our selection as well. We believe that the maternal value of the British breeds of cattle are a benchmark for the industry. The idea of us working to get calves to suck their mothers, and or milking a cow out so that a calf can latch her teat are things of no desire for us to breed towards; nor do we see value in such actions for the long term of the industry. Cattle breeding is very much our passion. Our goal is to produce cattle with integrity that will work for our customers and provide value inside and for the industry.

We mention it every year, but we feel we can't say enough how fortunate we feel to get to work with and interact with industry leaders like you, our customers, year in and year out. We appreciate being able to learn from you and work with you and are thankful for your continued support. Our sale format is very much so the same as years past with a selection of open commercial heifers selling prior to the bulls. Mona Howe and her family have consigned a great group of black angus heifers and we will have an assortment of RWF, BWF, red and black home-raised heifers on offer as well. These are top cut females designed to work. Please check out the heifer listing in the catalog for specific health protocols and matings. We recognize that we are fortunate to have people in our lives that help us throughout the year to continue the development and growth of our genetics and operation. We would like to thank our family, friends and neighbors for this continued support as well as our herdsman Hayley Clark and our hired man Gavin Christiansen. These two young adults bring some new ideas and a lot of fun to the day to day around here and we appreciate all that they contribute. You may have noticed a shift in sale dates to the third Tuesday in March. Our sale will now be the day after the great folks of the Grassroots Sale Group's event on Monday. With an even larger group of bulls to go through, comprised of the Red Angus, Black Angus, Hereford, Simmental, and Charolais breeds, with sales running over two days we are very excited for these two sales events and the days of the weekend leading up to them when both offerings will be available for viewing at Dryland. We will once again be broadcasting the sale live on DLMS.ca and we will have videos available for viewing on their website the last week of February. If you are in our area please feel free to stop in and view the offering anytime prior to the Friday before the sale. Contact us anytime with questions or inquires. We spend a great deal of time evaluating these bulls and we are more then willing to give you our interpretation of what they are and what their genetic potential can offer a cowherd. Thanks in advance for your consideration of the genetics of our program.

The Pugh Family

PUGH FARMS 2021 SPRING BULL SALE

1PM, TUESDAY MARCH 16, 2021, DRYLAND CATTLE TRADING CORP / VETERAN, AB

Join us for lunch at noon / Bulls can be viewed at the farm anytime prior to the sale.

If you are unable to join us on Sale Day in person please join us by watching the Sale Live on DLMS

INSURANCE:

Insurance: Linda O'Leary & Wendy Ruck / Western Financial Group: 780-842-4411

VOLUME DISCOUNT:

If you need 3 or more bulls we will provide you with a 3% discount on the total purchase price of the bulls.

BULL DEVELOPMENT AND DELIVERY OPTIONS:

Pugh Farms reserves the right to draw semen on any of the bulls in the offering at their own cost and buyer's convenience. We will start delivering the bulls to their new homes after April 1st. and we will also arrange a day that the bulls can be picked up mid April at Dryland. Whichever option suits the buyer. All heifers need to be picked up on sale day.

BREEDER GUARANTEE:

Pugh Farms guarantees our bulls to be sound, fertile and reproductive in accordance with the rules and regulations of the respective Breed Associations. If a problem occurs, please contact us immediately and we will provide a suitable replacement (bulls only) or take a sale credit.

FERTILITY TEST:

All bulls will be semen tested prior to delivery. Due to the age of the yearling bulls at the time of the sale they will be semen tested prior to delivery and are sold as guaranteed breeders. If for some reason a yearling bull is not evaluated as a sound breeder a suitable replacement of equal value will be available to the buyer and or a credit towards the purchase or another bull of which the value will be decided upon between the buyer and the seller.

SIGHT UNSEEN:

We would love to have you be with us. However we do understand how busy things can get around your operations. Our sight unseen program is simple. Call us in advance and we will discuss your needs, cowherd, goals and which bull or bulls will work best for you. Satisfaction guaranteed. If you want to bid live sale day feel free to Contact Greg (780-806-1319) or any of the Pugh Farms Contacts or Dryland (403-575-3772) or if you want to leave a bid with any of us at Pugh Farms or the Staff at Dryland you can do so and they will be kept in the strictest confidence.

TERMS OF SALE:

Cash or Cheque payable in Canadian Funds. The right to property shall not pass until after settlement has been made. All settlements must be made with the clerks of sale before cattle will be released unless prior arrangements have been made with seller.

COVID 19 PROTOCOL

We will adhere to the guidelines laid out by Alberta Health Services given at the time of the sale.

LIABILITY

All precautions will be taken on sale day and for the sale. Pugh Farms and Dryland Cattle Trading Corp. and their staffs assume not responsibility for injury or loss of personal property.

DISPUTES:

If at some point during the auction two bids are received from two parties at the fall of the hammer the bidding will be reopened between these two parties and these two parties only to determine selling price and to whom is the winning bidder. All information given from the block sale day will supersede any printed information provided in the catalog.

HERD HEALTH:

For the coming two year old and yearling bulls they were vaccinated at birth with Once PMH intranasal and given Multi min 90 and Selenium injections. They were vaccinated at grass turn out time with Vista Once and Vision 8 with som and then again at pre conditioning for weaning they were given Vista Once and Vision 8 Somn and poured with ivermectin . The coming two year olds were given Safe-Guard crumbles in early fall and poured with ivermectin late fall.

Angus GS Testing

We have added AngusGS testing to further evaluate our bulls in the offering. Genomic technology has been used to make EPDs more accurate. The genomic data increases the accuracy with which we relate animals to each other, verifying pedigree information, and allowing us to apply phenotypes of related animals to non-phenotyped animals. Genotyping animals has led to more accurate EPDs for younger animals. This means that doing the Angus GS test on an animal gives you as much information as having 23 calves with birth weights recorded and as many as 12 calves tested for individual feed intake. These results will be ran through the February National Cattle Evaluation and will be made available Sale Day.

our Docility RATING explained

- 1 = **Docile** - acceptable, mild disposition
- 2 = **Restless** - restless during processing
- 3 = **Nervous** - nervous and impatient
- 4 = **Flighty** - jumpy and out of control, quivers and struggles)
- 5 = **Aggressive** - extreme agitation
- 6 = **Very Aggressive** - extremely violent behaviour

our Calving Ease RATING explained

- *** **Will work on heifers**
- ** **Will work on second calvers and older**
- * **Will work on cows**

our Foot Angle RATING explained

- 1 = Extremely straight pasterns. Very short toe. Unsound.
- 2 = Straight front and rear pasterns. Marginally unsound.
- 3 = Moderately straight front and rear pasterns.
- 4 = Slightly straight front and rear pasterns.
- 5 = Approximately 45-degree angle at pastern joint. Appropriate length of toe and depth of heel.
- 6 = Slightly shallow heel.
- 7 = Moderately shallow heel and long toe. Somewhat weak pasterns.
- 8 = Shallow heel and long toe. Marginally unsound.
- 9 = Extremely shallow heel and long toe. Extremely weak pasterns. Unsound.

our Toe Set RATING explained

- 1 = Extremely weak, open, divergent toe set. Unsound.
- 2 = Open, divergent toe set. Marginally unsound.
- 3 = Moderately open/divergent toe set.
- 4 = Slightly open toe base.
- 5 = Symmetrical toes, with appropriate space between toes.
- 6 = Slight tendency for toe point to turn in.
- 7 = Tendency for claws to curl, with one claw larger than the other.
- 8 = Moderate scissor claw and/or screw claw. Curling of one or both claws. Near crossing of claws. Marginally unsound.
- 9 = Extreme scissor claw and/or screw claw. Pronounced curling of one or both claws. Crossing of claws. Unsound.

OUR BULL DEVELOPMENT PHILOSOPHY

We believe when you buy a bull, you're not only buying what you can see in the phenotype of that animal or even the genetic value of that animal. You're getting the history and development of that bull as part of the package. For that reason, we work to be very intentional with how these bulls are raised. We are strategic in their management in order to provide you with the experience you're looking for. One focus is longevity. These bulls were born on grass on large pastures allowing them as babies to walk alongside their mothers for food and water; traveling long distances at an early age. In summer they graze the river hills, where elevation change is dramatic. This gives them the change to develop structurally and also harden and develop muscle. We utilize extended grazing systems and these bulls are left on their mothers to graze swaths or corn; once again needing to move significant distances to a water source. They are pre-vaccinated prior to weaning, and when weaned are done so as stress free as possible; given fence line access to their mothers. We work to acclimate these bulls to their new environment, as we believe low stress cattle are less prone to sickness and weakened immunity. These weaned bulls are then fed a balanced TMR ration complete with chelated mineral with a goal of moderate gain. The following spring these bulls are ran in one contemporary group on a large land base where the elevation change and distance gives them an opportunity to roam, forage, and harden and gives us an opportunity to evaluate their performance in this situation. They are grazed through the fall, until the grass is dried off at which point we supplement in troughs -giving these bulls some human interaction. They then return to a high forage TMR ration for the course of the winter. We work to expose these bulls to being moved by people on foot, dogs, horses and quads, as we want them to have been subjected to situations they may find themselves in at your respective operations. They have been trailered and handled multiple times and we are conscientious in working to make such actions positive experiences for these animals. We believe that our bulls need to be athletic, be able to perform, and have longevity on your operations. We are continually working to take actions that impact that ability in order to provide you with breeding pieces that suit your livelihood.

YEARLING BULL DEVELOPMENT PROGRAM

Our Yearling Bull development program carries the same thought process as developing our coming two-year-old bulls. We believe that to develop these bulls with their longevity in mind we need to start at day one. These bulls are calved out in the winter so they are handled for the first few days of their lives. Once they are turned out of the barn with their mothers they are placed in large pens with calf shelters on one side and a water tire on the other. We find this helps promote exercise early on as the calves are often seen trailing back and forth from the water to the bed ground. Once the snow starts to leave we move the pairs into an 80 acre pasture. This pasture allows the opportunity for hill side travel when the snow moderates and the days are longer seeing the cows traveling in this larger area. In early spring these winter calving pairs are turned to a river hill pasture of stockpiled native grass with seeded crested wheatgrass. The wheatgrass is seeded on an aggressive slope where it greens early in the spring promoting the cattle to graze up hill and down. This hardens and starts significant muscle development in the calves. When summer hits the winter born pairs are turned to a large native grass pasture in a wide part of the river valley. Travel is key to find optimal grazing so this pasture is utilized to promote movement and stamina to gain on hard grass. As the summer progresses the pairs are rotated closer to a yard with working corrals. The final pasture they see on their mothers is all native grass with three significant coulees running through it. The up and down hill movement of the cattle as they travel this pasture further tests structural soundness and hardens the muscle pattern on the calves. When weaning comes we utilize quiet wean nose paddles to put as little stress on the calves as possible. After a short on cow weaning period the bull calves are hauled back to the main yard where they are grazed on alfalfa/brome paddocks throughout the fall. They are supplemented with a protein source in troughs during this time as like the coming two year olds this allows us the ability to further assess temperament. When winter sets in they are then moved to a large development pen and started on a high forage TMR ration utilizing chelated minerals to optimize lean muscle development. We believe that like the older bulls these yearlings need to last and cover cattle on large pastures. They are hardened and know how to forage extensively.

SIX MILE ADVANCE 262C

We have started a new series of Zoom meetings to share some knowledge from some of our industry's leading representatives. These Table Talks are a way for us to say thank you for your support of our program.

For our second event we have two speakers presenting. One topic will be genomics and we have Lance Leachman presenting information regarding the value of genomics and how they are relatable and relevant to cattle trait selections. Our other topic will be calving/calf Health and Dr. Trent Wennekamp will be speaking on practices and guidelines to work with during the calving season, as well as tips to aid in overall calving success year to year. These talks are an informal way to share info and are geared to be a half an hour of presentation and a half an hour of question and answer.

Please join us by contacting us either by email or phone so we can send you the registration link for our March 12th meeting.

Guest Speakers:
Lance Leachman, Big Gully Farm

Dr. Trent Wennekamp DVM
Lloydminster Animal Hospital

EVENT DETAILS:
March 12, 2021, 7:00 PM
