

# BRANDING THE BEST

2022  
PRIVATE TREATY  
BULL SALE  
EDAM, SK

PRESENTED BY STUART CATTLE STATION

## BRANDING THE BEST PRIVATE TREATY BULL SALE

Welcome and thank you for your interest and continuing support. After hosting a bull sale at the ranch the past 4 years, we made the decision to sell bulls out of the yard going forward. It was always a dream of ours to host a sale at home and we did that. However, it just isn't a fit for managing the work load here at an already busy time of the year. We hope you understand and we look forward to having time for more one on one visiting with you on farm

This past year was sure a blur, and we all learned about what our cattle are capable of when push comes to shove. Through the help of many great neighbours, some creative ration balancing, and a lot of electric fencing, we were able to pull enough feed and grazing together to get the herd through. I'm not sure how, but as I write this intro, our main cow herd is still grazing stubble and regrowth in the middle of December. We never saw that as an option in July.

The bull pen is developing nicely and we look forward to showing you the offering. With the dry conditions, we were more aggressive than ever in deciding who stays and goes. There are a lot more purebred steer calves than bull calves this year. Whether you come in January or March, there are no leftovers in the pen. We don't feed these bulls aggressively, shooting for a 2.25 to 2.5 lbs ADG. No calves were creep fed even though pasture conditions were difficult at times.

The 2 year olds were on grass in early June and stayed on grass until the middle of November. Since then, they are wintering on 80 acres on a diet of silage and tub ground canola/Kochia for extra seasoning. Cattle have 4 stomachs for years like this! They are sound, athletic and ready to work.

We look forward to visiting with you in the coming months.. If you have any questions about the sale offering, please don't hesitate to call or text us

Your support means everything to us, and we thank you for considering us for your seedstock needs

*Mitch*

We use 5-10 straws of Cedar every spring and we are always wishing we did more. He consistently sires sons that calve easily, are early maturing and perform very well on test. The daughters off Cedar are square uddered females that are slightly smaller in stature, but milk above their weight. We should have never sold this bull

 DURALTA 32T ERICA 85Y

The best herd bull that we have had the pleasure to own. Touring the bull pen you will understand why. The stamp he puts on his sons is incredible. Lower profile yet heavy performing, great foot, early maturing and every one of them seems to have a presence in the pen. On the female side, I can say he is an udder improver with his daughters all having that wedge look and a great foot. He has run with 50+ females every summer and he gains weight while doing it. Help yourself to a large sire group of sons that are easy to find in the pen.

The leadoff, high selling bull from Milk Creek Reds in the spring of 2019. His sons were well accepted last spring, going to purebred and commercial herds alike. His sons are blood red tanks that will calve easily and leave daughters you will love. He is one of the most easy fleshing bulls you will find. He has pulled double duty the past 3 years, breeding for 100-120 days and never lost shape doing it. His first milking daughters will be calving this spring and we couldn't be happier with how they look. Their type will thrive in our environment. Co-owned with Wes and Kelly Lundell

A highlight bull from Wraz Red Angus that has done a great job siring powerful bull calves that consistently perform well, add length of spine and have a great foot. He crosses very well with maternally based cows that need some extra jam. He calves easily and the calves grow quickly. We await his first calving daughters this spring, and they have the same look and growth. If you background your calves, he is highly recommended.

**BW average on sons - 83 lbs. BW average on daughters - 80 lbs.**

The 2 year old bulls represent a cross section of last years bull pen. Some saw use here or at customers pastures. They have not seen grain since April of 2021. They grazed until mid November when the snow got too deep. Since then they have been on a diet of silage and chopped forage on 80 acres and a water bowl. All 2 year olds will be trich tested in the spring
