CATALOGUE ORDER IS SALE ORDER

Development & Delivery

We will continue to develop your newly purchased herd sire(s) for you at no cost. All we ask is that you insure your purchase for the duration that he is being developed. The bulls staying until spring will be semen checked and delivered to you in April/May or as loads develop for your area. For anyone wanting to develop their own bulls, a rebate of \$250 per bull will be subtracted from the purchase price. This applies to any bulls taken sale day or delivered within seven days of the sale.

Semen Testing

Each bull in the sale has been palpated, scrotal measured and vet inspected twice prior to sale. Once in the spring prior to going to grass and once again just before cataloging. None of the bulls have been semen tested. Before delivery in the spring, we will semen test and guarantee every bull to pass and be fit for breeding. We highly recommend that if your turn out date is mid-summer, to have your bulls semen checked within 30 days of turn out. Any bulls that are picked up or delivered within 7 days of the sale will need to be semen checked by the purchaser. A replacement bull or credit will be issued for bulls incapable of settling cows. The credit can be used at any sale, on any class of cattle or breed. At no point shall the compensation be greater than the purchase price.

Online Bidding

Watch and bid on-line at DLMS.ca, (Mark Shologan, 780-699-5082) If you're planning to bid on-line, please feel free to contact the sale staff or Darren as we are pleased to help select a bull(s) that will fit into your program. It is our utmost priority to ensure you secure the correct bull for the system and role you plan to use him in.

RED ANGUS • RED SIMMANGUS

Moose Creek

2-YEAR-OLD BULL SALE

1:30PM • SATURDAY, FEBRUARY 18, 2023

at Moose Creek Red Angus

3 MILES SOUTH & 1 MILE EAST OF KISBEY, SASKATCHEWAN

Welcome to the 2023 Edition of the Moose Creek 2-Year-Old Bull Sale. We are excited and grateful that you've spent the time to read through our catalogue.

As you will notice, changes have happened at Moose Creek. We hosted a successful Charolais dispersal that garnered interest and landed white bulls and females from the Maritimes to the Rockies. Thank you to the loyal ranchers who have let us supply them with white bulls throughout the years.

We felt that our Red Angus program was being neglected with having both breeds. Our goal is to invest more time and resources than ever into our Red program. It is the base for our family business success.

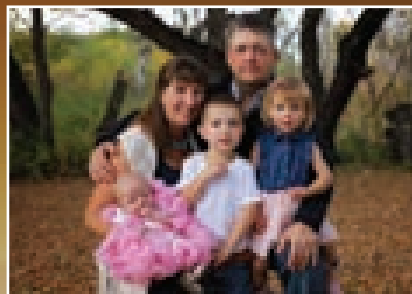

Our cowherd is what separates our herd from our peers. Bold, sound, fabulously uddered cows that forage for a living in an extremely competitive environment without pomp and pageantry. They're worth the drive to see in the flesh.

If you've not attended or participated in one of our sales be prepared to see responsibly developed, sound, free moving bulls. Grown out in big pens and sent to grass, these 2-year-olds are tested, culled and critiqued on real world evaluations.

Come early and view the bulls at your leisure, drive to the sale with your family in the car and let us look after the rest. That's the way we've been doing it for 6 decades.

EPDs only one part of the genetic selection formula

By Piper Whelan, Canadian Cattlemen

It's not everyday you visit a 7,000-head beef operation in Kenya, but that's not the only reason the experience was memorable for PJ Budler. When he visited this herd of Boran cattle, a breed native to Kenya, for a consulting project, their quality left him amazed.

"You could hardly find an animal that didn't have perfect feet, perfect udder, and bulls with perfect testicles," he recounted at the Canadian Beef Breed Council's Technical Forum, held during the 2018 Canadian Beef Industry Conference in London, Ont. "I said to them, 'How did you do this? This is incredible.' And they said, 'We didn't. These cattle have been there for 1,600 years, and they've got a herd instinct, and the ones with bad feet get eaten by lions.

"There are lions on the property and leopards and hyenas and wild dogs. The cows with bad udders that can't get a calf up and sucking in good time, that calf gets eaten by predators as well, and the fertility traits just go naturally with it," he continued. "These guys are letting nature select their cattle, and also they had immaculate records when it comes to pedigrees and performance, but they're not even doing any EPDs."

Budler, who was raised on a fifth-generation beef operation in South Africa, is now based in Fort Worth, Texas, and also runs TheCattleMarket.net LLC. While genomically enhanced expected progeny differences (EPDs) and other measurements rule the day in his new home state, a person would be unlikely to find a herd there with the overwhelming quality of this Kenyan herd. There's also the popularity of the U.S. club calf industry to consider. "Functional efficiency isn't a term that's used at all down there, so maybe this gives context to why that Kenyan experience sobered me up quite a lot."

Whether it's through consulting projects or his role as the international business development manager for Trans Ova Genetics, Budler has seen how genetic selection tools such as EPDs can have an impact on a herd or breed. However, this isn't always for the better. "Is it genetic improvement or is it sometimes just genetic change?" he asked the audience. "I'd argue for the latter in some cases."

In one such case, he noted that "Angus EPDs in the U.S. have gone up significantly in the last 10 years, the weaning weight EPDs on average. But has the genetic potential improved? According to statistics, it hasn't. At best, real weaning weights have improved by 10 pounds."

Budler argued that while EPDs can be extremely valuable to

producers, they need to be used with thought, caution and honesty, and there are other tools and factors to be considered to make the best genetic selections for your operation.

Genetics is one of eight aspects he considers to be key in running a beef operation, the other seven being nutrition, herd management, animal health, forages, budget and record-keeping, marketing and human capital. "It's really just an eighth of what it takes to make a functional, sound beef cattle operation that's economically viable," he said. "No matter how good a job we do, there's seven other jobs that need to be done just as well for the deal to work. So I think we need to be careful."

As well, what is considered an ideal EPD can vary based on the setting and situation. "To say that an animal's got good EPDs is such a broad and subjective term," he said. "What is a good milk EPD? It depends where you live. It depends what your climate is. It depends what your resources are in terms of nutrition. There's no one good milk EPD."

EPDs are also just one tool available for genetic selection, and Budler stressed the importance of considering all the tools available, including phenotype, pedigrees and in-herd ratios. He gives equal consideration to each tool and notes the need to know what traits work in terms of functional efficiency. "It's an important job we've got, trying to feed the world, so these four make it pretty important."

Environment, other factors play a role

Budler considers technologies such as genomically enhanced EPDs to be beneficial tools that should be handled with care. "This is an incredible science," he said. "Unfortunately... a lot of the people who are taking this vehicle and driving it in the industry maybe don't have a license to drive it."

The metaphor of a car works nicely when considering this technology. "We wouldn't buy a car if we didn't know what its fuel conversion rate was or its top speed," he said. "I think the same goes for bulls. We want to know what their genetic potential is, and some of it we can't tell just by looking at it."

However, the conditions in which these traits are measured need to be considered. "We need to know whether that fuel conversion was measured in Toronto traffic or on a Saskatchewan highway, because that's two very different things," said Budler. "I can measure a Brahman bull's feed intake in Texas and then come measure it in winter in Saskatchewan, and it will be 60 per cent more to put on the

pounds in Saskatchewan.”

Environment and adaptability play a large role, one that Budler believes needs to be better considered. “The environment plays such a big part in the potential of an animal to express its genetics,” he said. “If we put an animal with an incredible potential to produce milk on marginal land, it not only doesn’t produce the milk it could produce compared to others, it also eats a lot more to not produce that milk.”

The traits considered most economically important in cattle will vary depending on the setting. “I think up here fertility, longevity, adaptability and efficiency are essential,” he said, noting that in places closer to the equator, a lack of adaptability will have a negative impact on the other three traits. “These are the things I think we need to get straight and get in line long before we start playing with some of the growth and carcass traits.”

Accordingly, he takes issues with programs that promise premiums for certain breeds when these animals may not be best suited to a particular region. “What Certified Angus Beef has done in the U.S. is criminal, because they’ve convinced guys on the Gulf Coast to run Black Angus cows where they should be straw-coloured or red or white Bos Indicus cattle,” he stated. “The Black Angus cows are in the ponds all of summer. You don’t see them, they’re like hippopotamuses with just their noses and ears sticking up like that. The amount of energy it takes for those cattle to do anything is all sent away from their ability to have fertility or to have longevity.”

Even with such premiums, the cost of raising an animal that isn’t best adapted to an environment may have an impact on

producers. “When they take that steer to market they get a premium on it, but it’s probably 10 per cent of what it cost to get there,” he said. “That’s my argument: we’ve got to push back against that propaganda and re-invite science back into the conversation. There isn’t a breed that works everywhere in the world.”

A valuable tool when used with care

Budler explained that EPDs are most valuable when used with best practices. “It’s an incredibly useful tool if people are doing all that measuring, and if the program that you’re buying genetics from has got a similar environment to where you work, and you know that there’s integrity and honesty in the way in which they’re collecting data.”

He praised the Canadian beef industry for its realistic approach to genetic improvement. “The associations I’ve dealt with in Canada are far more cautious and measured and don’t want to run with something new at a million miles an hour,” he said. “I think that’s why Canadian genetics are so appreciated globally, because there’s a measure of balance and caution when it comes to producing.”

Budler urged forethought in using genetic selection technologies to allow for the best use of these tools. “We need to encourage everyone to measure everything all the time, accurately and honestly in large numbers,” he said. “Associations and marketers need to make sure we drive this vehicle the way it was intended, with the fuel it was intended to run on, on the roads it was intended to run on, cautiously, thoughtfully and honestly.”

Red Angus

Our Red Angus program is one of the oldest and most respected in Canada. We've adapted to the needs of the industry; breeding, developing and marketing responsibly raised 2-year-old bulls. We practice what the market preaches - calving ease, respectable performance, maternal bred bulls whose daughters won't eat you out of house and home. No resources have been spared when trying to advance our cowherd, the walking sires are household names across the industry. However, most importantly, 7 decades of strict Red Angus breeding reputation is on the line every time we offer a herd sire for sale.

Red SimmAngus

The growth of our Red SimmAngus offering is a product of demand and luck. The base of our Red SimmAngus program is from two elite Red Angus herds we were fortunate to purchase. To develop superior Red SimmAngus stock, we knew we needed to start with an elite base. The foundation for our Red SimmAngus offering is as strong as any in the nation. They have been the reason for our success marketing more than 400 home raised, F1 bred females the last couple years. Their breeding strength is undeniable.

GLOSSARY

DETAILING TERMS USED IN THE CATALOGUE

The data we supply in the catalogue is actual, relevant numbers to help you make important selection and breeding decisions. These numbers include actual performance data taken at the stages of development that are critical to commercial operations: birth, weaning, and coming off of summer pasture. Current weights offer additional comparison tools.

CALVING EASE SCORE	EXPLANATION OF SCORE	PREFERRED FEMALE TYPE/AGE
*	Least calving ease	Mature Cows/Large Framed
**	Minimal difficulty expected	Cows/2nd calvers
***	No difficulty expected	Well developed heifers under supervision
****	Tremendous calving ease	Heifers of all sizes in minimal supervision
*****	Exceptional calving ease	All classes with no supervision

EPD'S

A MESSAGE FROM DARREN ABOUT the decision to not publish EPD's in the sale catalogue. It was a choice we struggled with as I believe that EPD's give one more set of information to use to choose your herdsire. The reason, mainly, is due to the inconsistency in the methodology that is being used by our Canadian Angus Association. Until the process is explained to us and we fully understand it, I do not have confidence that I can relay that data to our customers. Until then, we will not be publishing them. However, the bulls have them and if you are interested, please contact me prior to sale day and I can print off their numbers for you.

TERMS & CONDITIONS

CONDITIONS & GUARANTEES: All entries sell with a responsible breeder's guarantee of satisfaction. In the unlikely event of any dispute whatsoever, regular terms & conditions shall apply in accordance with the Canadian Angus Association Code of Ethics.

ALL CATTLE ARE SOLD subject to tests as required for export under Regulations of the Health of Animals Branch, Department of Agriculture for Canada. Export health chart and brokerage charges are the responsibility of the purchaser.

TERMS OF PAYMENT: Cash or cheque payable to the clerk of sale on sale day. U.S. Funds will be accepted at the current Rate of Exchange on sale day.

INSURANCE: Ownership risk to purchaser commences when auctioneer's hammer falls. Full mortality insurance is available sale day. Cattle returning to Moose

Creek Red Angus after the sale must be insured.

HOLDING & SHIPPING: Approximately one week is required for export transfers and other documents to be processed. Export animals will be held at the Sale location at no charge and under excellent care. Joint export shipping arrangements to obtain minimal shipping cost will gladly be made if instructions to that effect are provided to Clerk of Sale at time of settlements.

TRUCKING: Free delivery will be available for any bulls selling for \$3,500 or more. Bulls selling for less will be delivered at cost, except if multiple lots are purchased, delivery is free. Delivery will begin mid April, anyone requiring their bull for May turnout will have them delivered in April. Most deliveries will be to your yard, however some may be to central locations due to size and time. If the truck is headed past your yard, expect your bull to be on it. Anyone taking advantage of the

delivery option must insure their bull, no exceptions.

HAUL YOUR OWN: Bring your trailer sale day and receive a \$250 discount per bull.

OWNERS: Reserve the right to withhold from export shipment animals for whom Buyer or Buyer's agent have not made arrangements for payment in full, or other satisfactory arrangements, prior to time of export departure.

ALL PERSONS who attend the sale do so at their own risk, and the owners and sale staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.

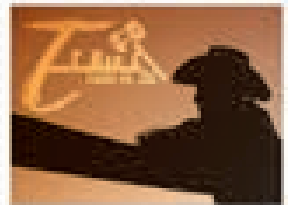

VOLUME PURCHASES Any buyer purchasing three or more bulls of any breed will receive 5% off of the purchase price total. This can be used with the "haul your own" discount.
